

**Biology**  
**DNA Model Project**

**Project Summary:**

Create a three dimensional model of a strand of DNA. This model must be accurate in representation. You must include a key which provides an indication of what the sugars, phosphates, and bases are.

**Composition/Construction:**

The construction is to be an accurate representation of the strand. To determine what this comprises, you will need to do some research on the DNA strand itself. The composition may be of any material which will allow the strand to be free standing. Projects in the past have included Styrofoam, clay, candy, pipe cleaners, wire, etc. The point is to be creative while also to give a true example of the DNA strand.

**Due Date:**

The completed project is due on Wednesday, September 16<sup>th</sup>. *No late projects will be accepted.*

**Grading**

This project counts as a test grade. *AGAIN, no late projects will be accepted!*
